Professional profile

Software engineer and Business Information Technology graduate developing web and mobile applications, ERP integrations and workflow automation. Experience covers enterprise software, REST APIs, WhatsApp approval workflows, attendance integration and locally hosted AI applications. Combines software development, testing and deployment with practical understanding of business operations.

Technical capabilities

Development: PHP, JavaScript, TypeScript, Python, Dart, SQL, HTML and CSS. Laravel, Next.js, Node.js, Express.js, FastAPI, Flutter and Streamlit.

Systems and data: REST APIs, webhooks, authorization, PostgreSQL, MySQL, SQLite, Docker, Linux and Git.

Quality and delivery: Postman, functional and regression testing, integration validation, UAT support, deployment troubleshooting and technical documentation.

Professional experience

Full stack developer

Ma Cargo Transporters and Forwarders, ABOOD Group of Companies
August 2026 to present

Develop and support enterprise applications, APIs and operational workflows. Contribute to property management ERP functionality and integrations involving approval workflows, attendance data and business systems.

ICT field practical training

Kilindi District Council
July to November 2024 and July to November 2025

Provided user support, software installation, computer and printer configuration, biometric device assistance and routine network troubleshooting.

Selected engineering work

WhatsApp approval gateway

Developed and tested ERP approval workflows with identity verification, callbacks, audit records and background delivery. Validated integration contracts and interactive decision flows in a test environment.

Attendance integration

Built and tested an attendance forwarding pipeline connecting device records with HRM workflows. Implemented transaction filtering, device serial handling, queues and batch delivery.

Radio studio gateway

Developed and tested RadioBOSS playback control, track insertion and scheduling safeguards through a Python gateway. ERP scheduling integration is in development.

Kilindi traders digital licence management system

Built licensing and renewal workflows, debt monitoring, SMS reminders, reports and audit logs using Laravel, PHP and MySQL. Validated imports, permissions and calculations, and supported deployment.

Student support AI assistant

Developed an academic project combining FastAPI, Ollama and FAQ retrieval to provide locally hosted student support. Tested API integration and grounded responses.

Education

Bachelor of Science in Business Information Technology
University of Dar es Salaam, 2023 to 2026.

Advanced Certificate of Secondary Education
Bunda High School, EGM, Division I, 2021 to 2023.

Certificate of Secondary Education
Iligamba Secondary School, Division I, 2020.

Entrepreneurship and development

Founder and operator of RJAY Digital Hub and RJAY Barbershop, combining customer operations, digital branding and technology adoption.

NMB Nuru Yangu Scholarship Mentorship Programme, 2026. National Service Training, JKT 822 KJ, 2023.
