Professional profile

Software engineer building web applications, APIs and enterprise integrations. Develops business platforms and automation workflows, with experience in database design, deployment and troubleshooting.

Technical skills

Development: PHP, JavaScript, Vue.js, Dart, MySQL, HTML, CSS and Python.

Integration and data: REST APIs, webhooks, authentication and database design.

Servers and hosting: Contabo VPS, cPanel, Linux/Ubuntu, Nginx, Docker, DNS, SSL certificates and application deployment.

Delivery: Git, Postman, automated and manual testing, systemd service management and technical documentation.

Professional experience

Full stack developer

Ma Cargo Transporters and Forwarders, ABOOD Group of Companies
August 2026 to present

- Develop and support enterprise application features, REST APIs and operational workflows.
- Build integrations for ERP approvals, attendance data and radio advertising workflows.
- Investigate application and integration issues, validate changes and support deployment.

ICT field practical training

Kilindi District Council · July to November 2024 and July to November 2025

- Provided user support, software installation, device configuration and routine network troubleshooting.

Education

Bachelor of Science in Business Information Technology

University of Dar es Salaam, 2023 to 2026.

Selected engineering work

View completed projects and further details at johnportifolio.rjaybarber.shop.

RJAY Barbershop booking and service platform

React, FastAPI, MongoDB · rjaybarber.shop

Developed a customer booking platform with service catalogues, appointment workflows and administrative availability controls. Supported deployment on a Linux VPS.

Eagersky real estate platform

eagersky.com

Contributed to a real estate platform for discovering accommodation, browsing property listings and submitting booking requests.

WhatsApp ERP approval gateway

Python, REST APIs, webhooks, SQLite

Built a gateway connecting WhatsApp decisions with ERP approval workflows, approver identity, callbacks and audit records. Implemented background delivery and retry handling.

Biometric attendance integration

Python, PostgreSQL, Docker, REST APIs

Built an integration forwarding biometric attendance records into HRM workflows, with transaction filtering, device identification, queues and batch processing.

ABOOD Media radio advertising integration

Python, RadioBOSS API · appdemo.abooderp.com

Developing the studio integration for a system designed to track radio advertising sales. Connects ERP schedules with RadioBOSS playback and advertisement insertion.

Student support AI assistant

Academic project · FastAPI, Ollama, Streamlit, retrieval augmented generation

Developed a locally hosted assistant that retrieves university FAQ information and uses a language model to provide relevant student support responses.

Entrepreneurship and professional development

Founder and operator of RJAY Digital Hub and RJAY Barbershop, applying software, digital branding and customer service to business operations.

NMB Nuru Yangu Scholarship Mentorship Programme, 2026. National Service Training, JKT 822 KJ, 2023.
